1. **Maximum weight capacity is 800 lbs.**

2. **Always follow recommended incline for wheelchairs or scooters found in the user's guide.**

Safety and Maintenance: Regularly check ramp for damage, and check and tighten any loose fasteners. Keep ramp surface clear of ice, snow, dirt, leaves and other debris. For snow/ice, remove accumulation and sweep the surface clean. To remove dirt, leaves and other debris, sweeping the surface or using a garden hose will usually suffice, but, if needed, use a damp cloth or soft brush with non-alkaloid detergent and water. Rinse well and use extra caution if ramp surface is wet.

WARNING: Ensure that the top lip is secure before using ramp. We recommend attaching the ramp temporarily to the landing using the provided pins (drill ¼" hole in landing) or semi-permanently using screws through the pre-drilled holes at the top of each section (DIAGRAM 2). To prevent ramp from becoming dislodged during use, ensure that the top lip overlaps the resting surface. The surface holding the top lip needs to be substantial; make sure that the surface and supporting structure is of sound construction. Ramp may be slippery when wet or icy. Use only with a qualified helper and always use your lap belt.
